MISSOURI'S SOLAR ENERGY INDUSTRY
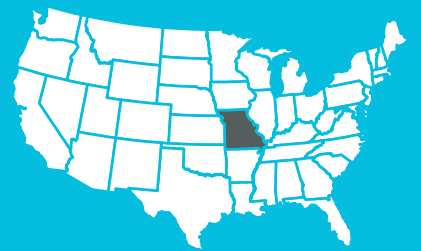

GROWING INDUSTRY: The electricity generated from Missouri's solar photovoltaic (PV) installations has more than tripled since 2017 *(Source: EIA)*. Missouri utilities plan to add more than 4,300 MW of solar over the next 10 years *(Sources: Ameren and Evergy)*.

ACCESS TO SAVINGS: Missouri requires electricity suppliers to offer net metering to residents with renewable electricity-generating systems, with the value of excess generation sent to the grid credited to the customer's next bill. Other solar incentives include rebates offered by utility companies.

POWERED IN MISSOURI: Energy innovation is taking place at institutions such as the Center for Research in Energy and Environment at Missouri University of Science & Technology and the Multiphysics Energy Research Center at the University of Missouri.

COMPETITIVE ADVANTAGE: Missouri's low cost of doing business, including affordable and reliable electricity, positions Missouri as a prime location for manufacturers in the energy sector.

CONNECTED TO EVERYWHERE: Missouri's location and extensive logistics infrastructure—including access to the two largest rivers in the U.S. and all the Class 1 railroads—make it simple and efficient to ship energy-related products around the world.
